Analysis of Catalytic Material Effect on the Photovoltaic Properties of Monolithic Dye-sensitized Solar Cells

Jurnal Elektronika dan Telekomunikasi, December 2017, e-ISSN : 2527-9955, p-ISSN : 1411-8289, Vol. 17, No. 2, pp. 30 - 35.

Dye-sensitized solar cells (DSSC) are widely developed due to their attractive appearance and simple fabrication processes. One of the challenges that arise in the DSSC fabrication involves high material cost associated with the cost of conductive substrate. DSSC with monolithic configuration was then developed on the basis of this motivation. In this contribution, titanium dioxide-based monolithic type DSSCs were fabricated on a single fluorine-doped transparent oxide coated glass using porous ZrO<sub>2</sub> as spacer. Herein, the catalytic material for the counter-electrode was varied using carbon composite and platinum in order to analyze their effect on the solar cell efficiency. Four-point probe measurement revealed that the carbon composite exhibited slightly higher conductivity with a sheet resistance of 9.8  $\Omega/\text{sq}$  and 10.9  $\Omega/\text{sq}$  for carbon and platinum, respectively. Likewise, the photoconversion efficiency of the monolithic cells with carbon counter-electrode almost doubled the efficiency of the cells with platinum counter-electrode. Our results demonstrate that carbon could outperform the performance of platinum as catalytic material in monolithic DSSC.

Keywords: carbon, counter-electrode, dye-sensitized, photovoltaic, platinum, solar cell.

Fabrication of Polyimide Optical Waveguide on Silicon Dioxide Layer Stacked Silicon Substrate

Jurnal Elektronika dan Telekomunikasi, December 2017, e-ISSN : 2527-9955, p-ISSN : 1411-8289, Vol. 17, No. 2, pp. 36 - 41.

Optical waveguides are important for guiding lightwave from a place to other places. Propagation and insertion losses of the optical waveguides should be considered to be in low values. Recently, optical waveguides with circular structures, which are optical fibers, are used widely for guiding lightwave in long-distance optical communication with very low propagation and insertion losses. Simultaneously, optical waveguides with planar structure are also developed for short distance communication in optical devices. We have reported design and analysis of the planar optical waveguides. In this paper, fabrication of planar optical waveguides using a polyimide material on thin silicon dioxide combined with the silicon substrate is reported. The polyimide material is used for the core of the optical waveguides. The silicon dioxide located on the silicon substrate and the air is used for cladding of the optical waveguides. Fabrication of the optical waveguides such as oxidation, photoresist coating, masking, ultra-violet exposure, and etching was done. The fabricated optical waveguides were characterized physically using a standard microscope and scanning electron microscope (SEM). The fabrication processes and characterization results are reported and discussed in detail.

Keywords: optical waveguide, polyimide, silicon dioxide, silicon.

Determination of the Optimum Wavelet Basis Function for Indonesian Vowel Voice Recognition

Jurnal Elektronika dan Telekomunikasi, December 2017, e-ISSN : 2527-9955, p-ISSN : 1411-8289, Vol. 17, No. 2, pp. 42 - 47.

Nowadays, wavelet has been widely applied in extracting features of the signal for automatic speech recognition system. Wavelets have many families that are determined by their mother

function and order. The use of different wavelets to analyze the same signal would bring different results. In many cases, a trial and error procedure is used to select the optimal wavelet family. That is because there are no particular wavelet basis functions that can be applied to the entire speech signals. Therefore, it is necessary to analyze the similarity between the speech signal and the wavelet base function. One of the methods that can be used is cross-correlation. In this study, the degree of correlation is determined between wavelet base function and Indonesian vowels. The influence of gender and consistencies of the results are also used in the analysis. The results show that db45 and db44 are most similar to male and female vowels utterance, respectively. For consistencies, only vowel e gives a consistent result. Overall, db44 is most similar to all Indonesian vowels utterance.

Keywords: automatic speech recognition, cross-correlation, Indonesian vowels, wavelet, wavelet basis function determination.

Tracking System for Indoor TV Antenna Based on CVBS Signal Processing

Jurnal Elektronika dan Telekomunikasi, December 2017, e-ISSN : 2527-9955, p-ISSN : 1411-8289, Vol. 17, No. 2, pp. 48 - 55.

Analog terrestrial TV is still a popular choice for urban societies although the migration to digital system has already begun. Video quality of analog TV was heavily influenced by antenna performance. Most users prefer to use indoor antenna due to its simplicity. The disadvantage of this type of antenna is the users may need to change the antenna direction repeatedly when they change to different TV channel. In this research, we designed and developed tracking system that enables indoor TV antenna to adjust its direction automatically to get optimum video clarity. This system is built by several servo motors and telescopic antennas. Composite Video Baseband Signal (CVBS) processing is used to obtain

reference information regarding video clarity level conditions on TV screen. The results show that CVBS signal processing has performance in describing video clarity level. System performance has been verified from trial results on some UHF channels. The minimum tracking time was 23.4 seconds and the maximum tracking time was 24.6 seconds.

Keywords: antenna tracking system, analog TV, telescopic antenna, servo motor, CVBS signal.

Latin Letters Recognition Using Optical Character Recognition to Convert Printed Media Into Digital Format

Jurnal Elektronika dan Telekomunikasi, December 2017, e-ISSN : 2527-9955, p-ISSN : 1411-8289, Vol. 17, No. 2, pp. 56 - 62.

Printed media is still popular now days society. Unfortunately, such media encountered several drawbacks. For example, this type of media consumes large storage that impact in high maintenance cost. To keep printed information more efficient and long-lasting, people usually convert it into digital format. In this paper, we built Optical Character Recognition (OCR) system to enable automatic conversion the image containing the sentence in Latin characters into digital text-shaped information. This system consists of several interrelated stages including preprocessing, segmentation, feature extraction, classifier, model and recognition. In preprocessing, the median filter is used to clarify the image from noise and the Otsu's function is used to binarize the image. It followed by character segmentation using connected component labeling. Artificial neural network (ANN) is used for feature extraction to recognize the character. The result shows that this system enable to recognize the characters in the image whose success rate is influenced by the training of the system.

Keywords: Optical Character Recognition (OCR), segmentation, feature extraction, artificial neural network (ANN).

## Reviewer Board

The Editor of JET would like to thank the wisdom and advice of many individuals who dedicated their considerable time and expertise in safeguarding the quality and high standard of academic integrity of the journal. We are greatly indebted to the expertise, dedication, and expeditious response of the following individuals for reviewing at least one and, in some cases, many manuscripts for the journal.

Prof. Tuptim Angkaew, Chulalongkorn University, Thailand

Prof. Dr. Ir. Eko Tjipto Rahardjo, Universitas Indonesia (UI), Indonesia

Prof. Dr. Ir Adit Kurniawan, Institut Teknologi Bandung (ITB), Indonesia

Assoc. Prof. Dr. P. Suthitha Menon, Universiti Kebangsaan Malaysia (UKM), Malaysia

Assoc. Prof. Dr. Jumril Yunas, Institute of Microengineering and Nanoelectronics, Malaysia

Assoc. Prof. Dr. Azrul Azlan Hamzah, Universiti Kebangsaan Malaysia (UKM), Malaysia

Dr.-Ing. Hutomo Suryo Wasisto, Technische Universität Braunschweig, Germany

# Author Guidelines

Writing should be submitted according to the following restrictions:

1. Manuscript should be written in English or Bahasa Indonesia and be submitted online via journal website. Online Submission will be charged at no Cost. An author must login in order to make submission. Manuscripts content should be arranged as the following order: **Title, author(s) Name and institutions, Abstract, Introduction, Method/Design/Model Design, Results/Implementation and Discussion, Conclusion, Acknowledgment, and References.**
    - **Title** must be brief, clear, specific and informative which reflect the article content. The length of the title maximum 14 words. Each word of the title should be started with a capitalized letter.
    - **Name of author(s)** are written as for references.
    - **Name of Institution(s)** where the research was conducted must be accompanied with full address including institution/department, city, and country, and e-mail.
    - **An abstract** must be written in English and Bahasa, in a single paragraph and no more than 250 words. Abstracts contain a clear statement of introduction, objective, methods, results, a significance of the finding, and conclusion, with no references cited.
    - **Key words** should be written in no more than 5 (five) words or phrases.
    - **An introduction** describes a brief background of the research, novelty, state of the arts, and objective(s). It should be written efficiently and supported by references. Extensive discussion of relevant literature should be included in the discussion, not in the introduction.
    - **Method/Design/Model System** describes research chronological, including research design, research procedure (in the form of algorithms, Pseudocode or other), how to test and data acquisition. The description of the course of research should be supported references, so the explanation can be accepted scientifically.
    - **Result/Implementation and Discussion** describes the results of research and at the same time is given the comprehensive discussion. Results can be presented in figures, graphs, tables, and others that make the reader understand easily. The discussion can be made in several sub-chapters.
    - **A conclusion** should be written briefly in a single paragraph but reflects the experimental results obtained.
    - **Acknowledgement** to person(s) or institution(s) who help the experiment should be stated.
    - **References** We suggest authors to use reference management software like EndNote or Mendeley to prepare citations in **IEEE style** and have minimum 10 references with 80% reference from journal/conferences within 10 years publication.
  2. Manuscript should contain at least 2.000 words and should have **minimum 6 pages** including embedded figures and tables, without any appendix, and the file should be in Microsoft Office Word 93-2007(.doc) format. It should be prepared in A4 paper (21cm x 29.7cm) using 2.5 cm for inside margin and 2 cm for top, bottom, and outside margins.
  3. Title, Abstract, and Keywords should be written both in English and bahasa
  4. The entire manuscript should be typed using Times New Roman (TNR) font in single spaced. Another font types can be used for special purposes. The title, author's name and affiliation address written in single column and centered format. While another parts of the subsequent manuscript should be written in two columns, justify, columns width 8cm, and columns spaced of 0.5 cm.
-

- 
5. Title should be less than 15 words, title case, small caps, centered, bold, font type Times New Roman (TNR), font size 18, and single spaced. The author's name separated with a comma and written using 13 TNR, title case, centered, and bold. Affiliation written sequentially using 9 TNR centered, and italic.
  6. Abstract contains neither pictures nor tables, justified, in 9 TNR, single spaced, and should not exceed 250 words in Bahasa Indonesia or 150 words in English. Heading is 'Abstract' (in English) and 'abstrak' (in Bahasa Indonesia): in italics and bold.
  7. Keywords contain three to five words/phrases separated with coma and should be justified, 9 TNR and single spaced. Heading is 'Keywords' (in English) and 'Kata Kunci' (in Bahasa Indonesia): in italics and bold.
  8. The main text should be written in 10 TNR single-spaced, justified and first line indent 0.63 cm. Consists of: Introduction, Main Content (Method/Material/etc), Result and Discussion, and Conclusion; followed by Acknowledgment and References.
  9. Heading should be made in four levels. Level five cannot be accepted.
    - Heading 1: title case, small caps, centered, bold, 10 TNR, single spaced, Roman numbered followed by dot
    - Heading 2: title case, left aligned, bold, 10 TNR, single spaced, Capital numbered followed by dot
    - Heading 3: title case, left aligned, italic, 10 TNR, single spaced, numbered by number followed by closed bracket
    - Heading 4 is not recommended, however, it could still be accepted with the format of: sentence case, left indent 0.63 mm, hanging indent 0.63 mm, italic, 10 TNR, single spaced, numbered by small cap followed by closed bracket
    - Heading 5 cannot be accepted in the manuscript
  10. Figures and tables should be in black and white, 150-300 dpi resolution, and if it is made in color, it should be readable when it is later printed in black and white. Figure and table should be clearly readable and in a proportional measure to the overall page. Figures / tables should be placed centered in column. Large figures and tables may span across both columns and must be placed at the top or bottom of the page.
  11. Figure captions should be below the figures; numbered, in 8 TNR, centered, and single spaced. For layouting purpose, please provide the respective captioned figure/table in with extension .tif/.jpg/.jpeg within a particular folder apart from the manuscript.
  12. Table heads should appear above the tables; roman numbered, small caps, centered, 8 TNR.
  13. Mathematical equation should be clearly written, numbered orderly, and accompanied with any information needed.
  14. Header and footer including page number must not be used. All hypertext links and section bookmarks will be removed from papers. If you need to refer to an Internet email address or URL in your paper, you must type out the address or URL fully in Regular font.
  15. Citation and Reference are written according to **IEEE style**. Citations numbering should be numbered in [1], [2], [3], ... format, according to appearance order. Written in centered, hanging indent 0.63 cm, 8 TNR, and single spaced. Refer simply to the reference number, as in [3].
  16. If multiple reference used, each number separated using comas as in [2], [3], [4]-[6].
  17. Detail referencing manual can be seen in the Author Guideline.
  18. The Board is authorized to reject a manuscript based on peer reviewer advice and make a necessary changes or adjustment related with language properties without altering the substance. Substance editing would be consulted with the first author.
  19. Primary references should be **at least 80% from at least ten references within 10 years**.
